

# Pneumatic Cylinders

*Series P1A*

*According to ISO 6432*

*Catalogue 9127006842GB-ul*

*Cylinder design conforms to ISO 6432 for simple design and integration with equipment. Fully interchangeable with all ISO standard mini-cylinders.*

*Cylinders are supplied complete with neck mounting and piston rod nut.*

### Double and single-acting versions

The Parker Pneumatic P1A range of cylinders is intended for use in a wide range of applications. The cylinders are particularly suitable for lighter duties in the packaging, food and textile industries.

Hygienic design, the use of corrosion-resistant materials and initial lubrication with our food-grade grease makes the cylinders suitable for food industry applications.

Careful design and high quality manufacture throughout ensure long service life and optimum economy.

Mounting dimensions fully in accordance with ISO 6432 and CETOP RP52P greatly simplifies installation and world-wide interchangeability.

The cylinders are available in bores of 10, 12, 16, 20 and 25 mm, with stroke lengths from 10 mm to 320 mm.

Single-acting cylinders with spring return in the retract direction are available in stroke lengths up to 80 mm.

Single-acting cylinders with spring return in the advance direction are available in 16 mm, 20 mm and 25 mm bore sizes and with stroke lengths up to 80 mm.

### Double-acting cushioned cylinders

Adjustable pneumatic cushioning permits greater loads and higher operating speeds, making the cylinders suitable for more demanding duties.

These cylinders are available in bores of 16, 20 and 25 mm, with stroke lengths from 20 mm to 500 mm.

### Options

In addition to a wide range of standard cylinders, Mini ISO cylinders are available in several standard variants, such as non-standard stroke length, extended piston rods, double piston rods, high and low-temperature versions etc. In addition, a complete range of sensors and fittings is available.

## Effective cushioning

The Mini ISO range is available with fixed end cushioning or with adjustable pneumatic cushioning, controlled by simple bleed screws for fine adjustment. The adjustable cushioned cylinders can be operated with higher mass loads and at higher speeds than those with fixed end cushioning, reducing overall cycle times.

## Smooth external design

There are no recesses or pockets in the end covers that could trap dirt or liquid, making cleaning simple and effective.

## Corrosion-resistant

Even the basic versions of the cylinders have good corrosion resistance through appropriate choice of materials and surface treatment, allowing them to be used directly in demanding environments.

## Stainless steel versions

The Mini ISO range is also available in an all-stainless version with piston rod, barrel and end covers of stainless steel for use in particularly severe environments. See separate brochure 9127005082GB-ul.

## Proximity sensing

A complete range of sensors for proximity sensing is available as accessories: both reed switch and Hall effect sensors are available. They are supplied with either flying lead or cable plug connector.

## Variants

In addition to the basic versions, a number of standard variants of Parker Pneumatics cylinders are available to meet exacting demands on function and environmental adaptation:

Non-standard stroke lengths

Extended piston rods

Through piston rods

Through, hollow piston rods

Single acting cylinder with spring return (in the retract direction).

Single acting cylinder with spring return in the advance direction (piston rod in extended position)

External guide, for controlled guidance of the piston rod

High-temperature cylinder versions for use in ambient temperatures ranging from -10 °C to +150 °C for bores 20 and 25 mm and -10 °C to +120 °C for bores 10, 12 and 16 mm

Low-temperature cylinder versions for ambient temperatures ranging from -40 °C to +60 °C

Cylinders for completely dry operation, without pre-lubrication

Teflon and copper free cylinders

Cylinders with outer sealings in fluorocarbon

Stainless steel cylinders, see brochure 9127005082GB-ul

Double-acting, cushioned stroke

Double-acting, adjustable cushioning

Double-acting, through piston rod

Single-acting, spring return

Single-acting, spring-extended

Double-acting, external guide device

**Important**

Before attempting any external or internal work on the cylinder or any connected components, make sure the cylinder is vented and disconnect the air supply in order to ensure isolation of the air supply.

**Cushioning diagram**

Use the diagram below to determine the necessary size of cylinder to provide the requisite cushioning performance. The maximum cushioning performance, as indicated in the diagram, is based on the following assumptions:

- Low load, i.e. low pressure drop across the piston
- Steady-state piston speed
- Correctly adjusted cushioning screw

The load is the sum of the internal and external friction, together with any gravity forces. At high relative loading it is recommended that, for a given speed, the load should be reduced by a factor of 2.5, or that, for a given mass, the speed should be reduced by a factor of 1.5. These factors apply in relation to the maximum performance as shown in the diagram.

Fixed end-cushioning

Adjustable pneumatic end-cushioning

**Material specification**

Piston rod	Stainless steel, DIN X 10 CrNiS 18 9
Piston rod seal	Fluorocarbon rubber FPM
Piston rod bearing	Multilayer PTFE/steel
End covers	Anodized aluminium
O-ring, internal	Nitrile rubber, NBR
Cylinder barrel	Stainless steel, DIN X 5 CrNi 18 10
Piston, complete	Nitrile rubber, NBR/steel
Magnet holder	Thermoplastic elastomer
Magnet	Plastic-coated magnetic material
Return spring	Surface-treated steel
Cushioning screw	Stainless steel, DIN X 10 CrNiS 18 9

**Variants Mini ISO:**

**Low-temperature version, type L:**

Piston rod seal	Nitrile rubber, NBR
Piston complete	Nitrile rubber, NBR/steel

**High-temperature version, type F:**

Piston rod seal	Fluorocarbon rubber, FPM
Piston complete, Ø10-Ø16	HNBR/steel
Piston complete, Ø20-Ø25	FPM/steel

**Cylinders for dry operation, type D:**

Sealings	Nitrile rubber, NBR/HDPE plastic
Scraper ring	Fluorocarbon rubber, FPM/HDPE plastic

**Teflon and copper free cylinders , type N:**

Piston rod bearing	PA plastic
--------------------	------------

**Cylinders with outer sealings in fluorocarbon, type V:**

Piston rod seal/	
Scraper ring	Fluorocarbon rubber, FPM

**Note:**

Spare part = new cylinder

**Note**  
Air quality is essential for maximum cylinder service life (see ISO 8573).

**Note**  
All technical data in this catalogue are typical data only.

Cylinders are supplied complete with neck mounting and piston rod nuts.

Cylinders with Through piston rods are supplied with two piston rod nuts and one neck mounting nut.

**Technical data**

Working medium	dry, filtered compressed air
Working pressure	max. 10 bar
Working temperature	-20 °C to +80 °C

**Materials, guide device**

Mounting flanges	Black anodized aluminium
Neck nut	Galvanized steel 8.8
Mounting plate	Surface treated steel, black
Flexible coupling	Stainless steel, X 10 CrNiS 18 9
Guides	Stainless steel, X 10 CrNiS 18 9
Guide bearings	Lubricant-charged plastic
Locking screws	Surface treated steel

Other data according to the base cylinder.

**External guide device**

Mini ISO cylinders can be fitted with an external guide unit to prevent the piston from turning. It guides the piston rod and enables the cylinder to resist turning moments on the piston rod and/or greater side loads.

The device consists of a substantial mounting plate and two guides that run along the sides of the cylinder in two bearing support guide sleeves. The mounting plate, which has pre-drilled mounting holes, is connected to the piston rod by means of a flexible coupling that prevents stresses from being transferred to the cylinder. The device is secured to the front end cover of the cylinder by a flange mounting and nut.

The device is available for 20 and 25 mm diameter cylinders, with stroke lengths from 10 to 250 mm. It is normally supplied factory-fitted (see the ordering data on page 7 for details of ordering), but can also be supplied separately to special order.

**Dimensions**

## Reed switch sensors

The reed switch sensors incorporate a well-proven, universal-voltage, compact reed switch element, making them suitable for a wide range of applications. They can work with electronic control systems or conventional relay systems. No environment is too severe.

### Technical data

Design	Reed
Output	Making
Voltage range, P1A-2XRL	110 VAC/VDC
Voltage range, P1A-2XSH	60 VAC/VDC
Max voltage drop	2,8 V
Max load current	180 mA
Max breaking power (resistive)	10 W
Min actuating distance	5 mm
Hysteresis	2 mm
Repeatability accuracy	±0,2 mm
Max on/off switching frequency	500 Hz
Max on/off switching time	1 ms
Encapsulation, P1A-2XRL	IP 67
Encapsulation, P1A-2XSH	IP 65
Temperature range	-30 °C to +80 °C
Indication	LED
Shock resistance	30 g
Material, housing	Nylon 66
Material, mould	Epoxy
Cable	PVC 2x0,2 mm <sup>2</sup>
Cable incl. female part connector	PVC 2x0,2 mm <sup>2</sup>
Mounting	Mounting yoke
Material, mounting	Stainless steel
Material, screw	Stainless steel
Connector	Diam. 8 mm snap on

### Reed sensor symbol

## Electronic sensors

These sensors are of solid-state type, with no moving parts. Short-circuit and transient protection is incorporated as standard. The integral electronics make these sensors suitable for applications with very high switching frequencies.

### Technical data

Design	Hall element
Output	PNP resp. NPN, N.O.
Voltage range	10-30 VDC
Max permissible ripple	10%
Max voltage drop	≤0,5 V at 100 mA
Max load current, P1A-2XMK, LK	150 mA
P1A-2XHK, EK, JH, FH	100 mA
Max breaking power (resistive)	6 W
Internal consumption	<30 mA at 30 V
Min actuating distance	5 mm
Hysteresis	1,1 - 1,3 mm
Repeatability accuracy	±0,1 mm
Max on/off switching frequency	1 kHz
Max on/off switching time	0,8/3,0 μs
Encapsulation, P1A-2XJH, FH	IP 65
Encapsulation, P1A-2XHK, EK, MK, LK	IP 67
